In sowing Snapdragon Seed always bear in mind that failure in germination usually results either from covering the seeds too thickly with soil or allowing the flats to dry out while germination is under way, or not applying sufficient shade up to time the seedlings appear. For winter crop the seed should be sown in June and protection should be taken to prevent damping off. Experimental tests have shown that on an average the most profitable spacing on an early crop is 8x8 inches. The closer the planting the smaller number of stems per plant and the shorter the stems. On a farther planting the cut per square foot is considerably less and the stems only a small percentage longer. Spring plantings however can be spaced closer. Grow in temperature about 45 to 48 degrees at night, 60 degrees during the day.

BEGONIA

Among the best bedding plants for semi-shady positions and equally valuable for house culture and pots.

Begonia

CALENDULA

Calendula are easily grown in a cool house with plenty of air. In fall, leave the ventilators wide open at all times if possible. A midwinter temperature of 45 degrees at night is best. If grown cool in a good soil you will get good hardy plants. The reason flowering plants sometimes come single is due to check in growth, such as poor soil, lack of water, or weakened through aphids. Sow seed first week in August for end of December or January crop. One ounce will produce about 2500 plants.

ANNUAL LARKSPUR

AN IMPORTANT CUT FLOWER CROP FOR BOTH INDOORS AND OUTDOORS

This beautiful hardy annual has been greatly improved in recent years with a wealth of new colors — longer flowering spikes and full double florets. We are listing the best and most up-to-date varieties.

Annual Larkspur is half hardy. In our latitude an outdoor fall sowing usually winters over when well started. This first outdoor should be followed by another sown as early as possible in the spring. Larkspur seed germinates poorly in a high summer temperature, and we do not recommend sowing during July and August.

TALL BRANCHING DOUBLE STOCK FLOWERED, 4 feet.

The tall double stock-flowered are best suited for outdoor planting. Seed sown latter part of September usually winters over well in our latitude.
